## Servo-Fill

Servo-Fill, where precision meets performance. Our range of auger fillers is meticulously designed to handle powders, granules, particulates, and blends with unmatched accuracy and efficiency. With Servo-Fill, you can trust that your filling needs will be met with precision and reliability, ensuring consistent results every time.

Choose between volumetric and gravimetric filling methods to suit your specific requirements. Whether you need consistent dosing based on predetermined volumes or dynamic weighing during filling for unparalleled accuracy, Servo-Fill has you covered.

Equipped with state-of-the-art servo drive systems and PLC controls, Servo-Fill auger fillers offer precise control over the filling process. Our intuitive interface makes operation effortless, allowing for easy setup and adjustment to meet your production needs.

Whether you require a floor-mounted solution with an in-line conveyor or a pillar-mounted configuration above other automatic machinery such as vertical form fill seal bagging machines (VFFS), Servo-Fill auger fillers offer versatile mounting options to seamlessly integrate into your production line.

From food and pharmaceuticals to chemical and cosmetic applications, Servo-Fill auger fillers are suitable for a wide range of industries and product finishes. Whether you're filling bags, bottles, or containers, Servo-Fill delivers consistent results every time.

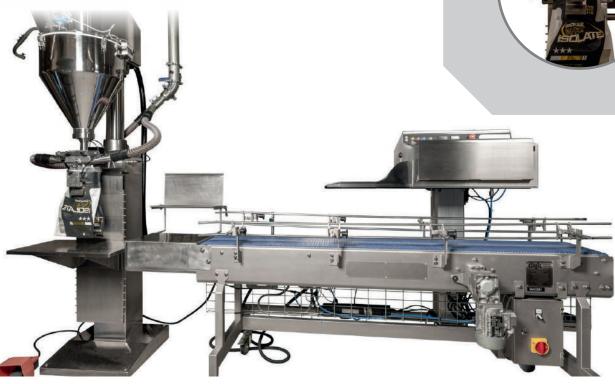

## Servo-Fill

## **Key Features:**

- · Precision filling for powders, granules, particulates, and blends
- Volumetric and gravimetric filling options available
- Advanced drive systems and PLC controls for precise operation
- Intuitive interface for easy setup and adjustment
- Versatile mounting options for seamless integration
- Suitable for food, pharmaceutical, chemical, and cosmetic industries
- Consistent results across various product finishes

Discover the power of Servo-Fill auger fillers today and elevate your production process to new heights of efficiency and accuracy.
